Written Plan for Spring 2012 Aerial Spray Project Near Type "F" and/or Type "D" Water

Operator: Western Helicopter Services, Inc.

Starker Forests, Inc. will apply herbicide within 100 feet of a Type "F" stream and/or Type "D" stream. All riparian vegetation within sixty feet of the highlighted creeks on the attached maps will not be directly treated by the aerial applicator. Herbicide use within any RMA will be restricted to those portions of the RMA's that have been clearcut (shown on attached map). Standing trees left within the RMA will not be sprayed.

Listed below are the herbicides which will be used in various combinations for the unit associated with the attached maps listed as Type "F" and/or Type "D" streams.

Sulfometuron methyl (Oust)
Hexazinone (Velpar DF)
Clopyralid (Transline)
2,4-D Acid (Hardball)
Atrazine (liquid)
Glyphosate (liquid)

The above herbicides will be applied with nine to nine and one half gallons of water per acre.

Target vegetation to be controlled includes all plant species which may compete with any conifer species for moisture, nutrients and/or light in the units on the attached maps, during the establishment phase of the plantation.

All applications will be made within currently recognized weather guidelines as product label allows.

All applications will be made parallel to Type "F" and/or Type "D" streams with a split boom system. Heliports, mixing and loading of chemical will be at least 100 feet from Type "F" and Type "D" streams. The treatment prescriptions described on this written plan are designed to protect shade, fish and wildlife habitat and water quality values associated with the stream.

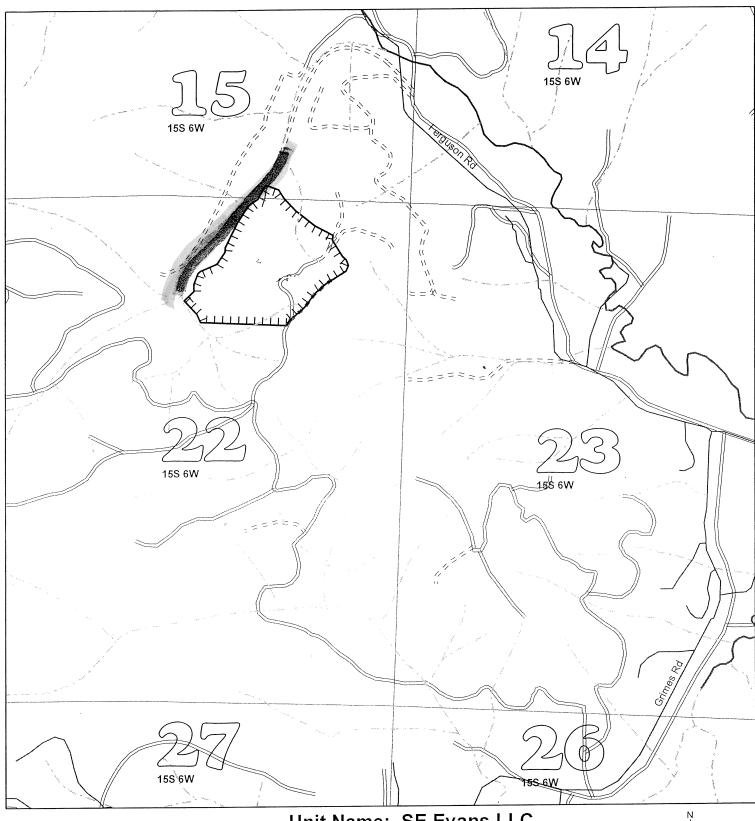

Aerial photos, maps and aerial reconnaissance of each of the attached Type "F" and/or Type "D" streams will be used to familiarize the operator with the units and the streams.

Treatment will be near the following Type "F" and/or Type "D" streams, colored pink on the attached maps.

Mark Gourley

WRITTEN PLAN OF OPERATION FOR ROADSIDE HERBICIDE APPLICATION

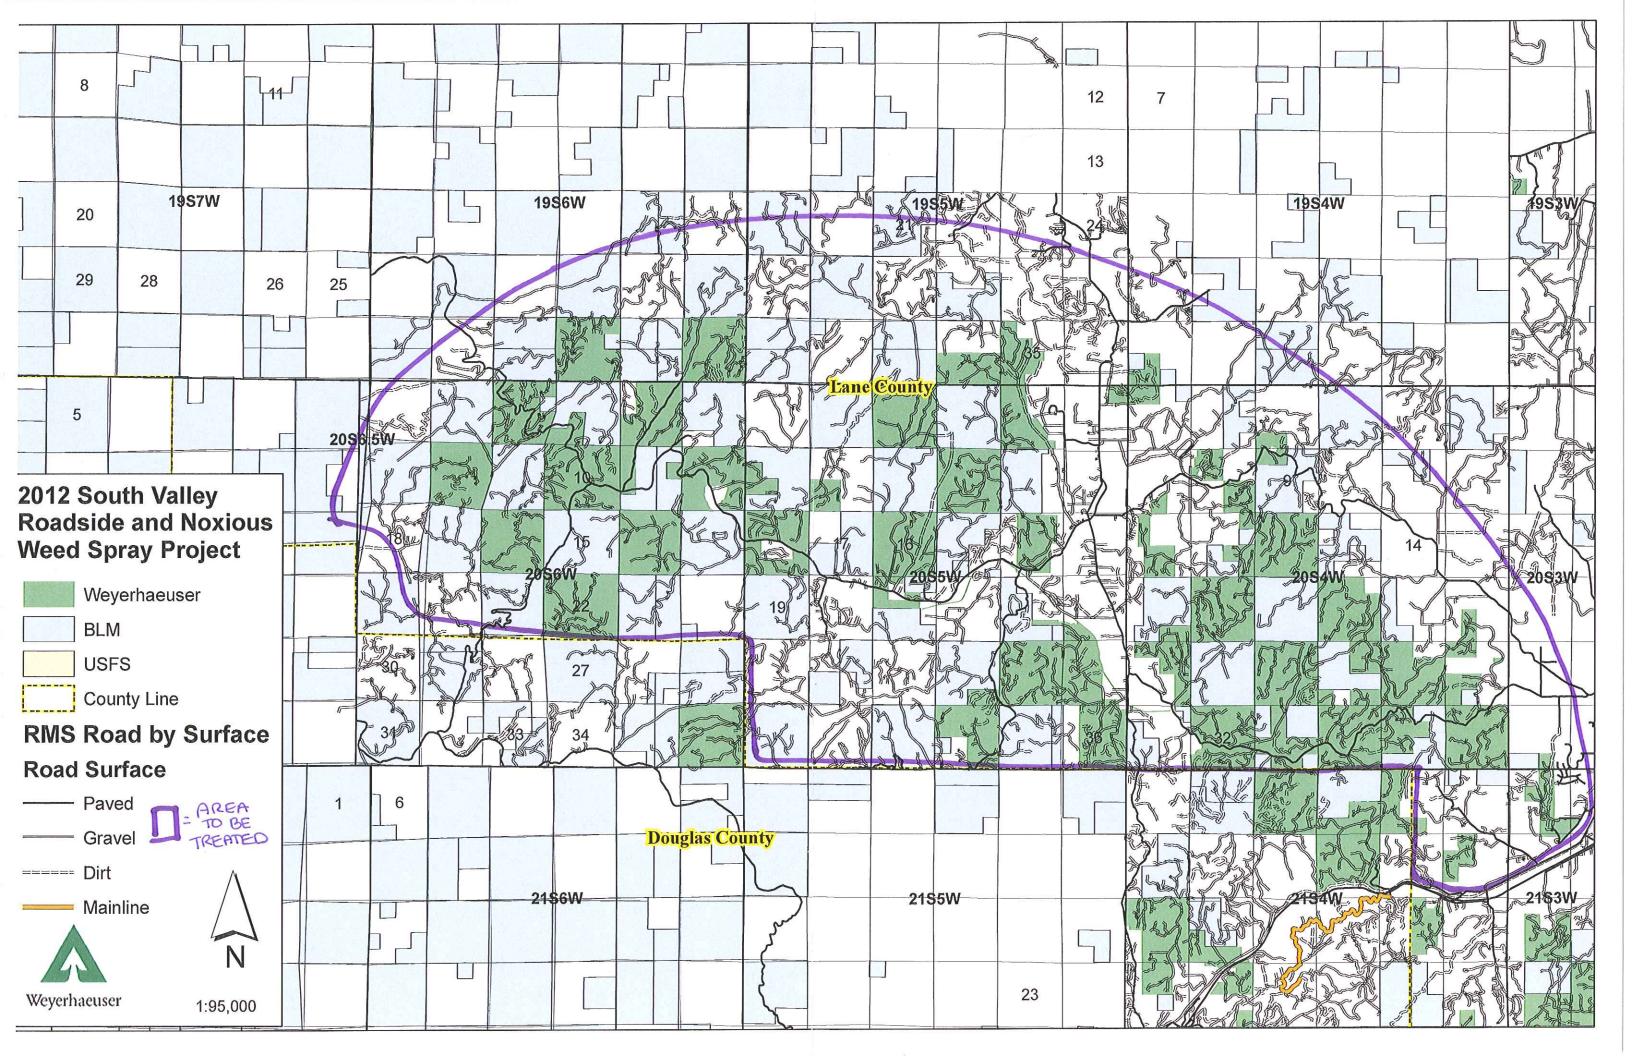

Weyerhaeuser Company is planning roadside/road surface spray applications targeting broadleaf, herbaceous, and/or noxious weed vegetation near protected resources. This letter is our submission of a written plan of operation for activities within 100 feet of protected resources. The map(s) submitted with the ODF notification shows the Weyerhaeuser property boundaries. All roads within the ownership on the notification may be sprayed. The known fish and domestic resources will be protected; chemical will not be mixed within 100 feet of protected resources.

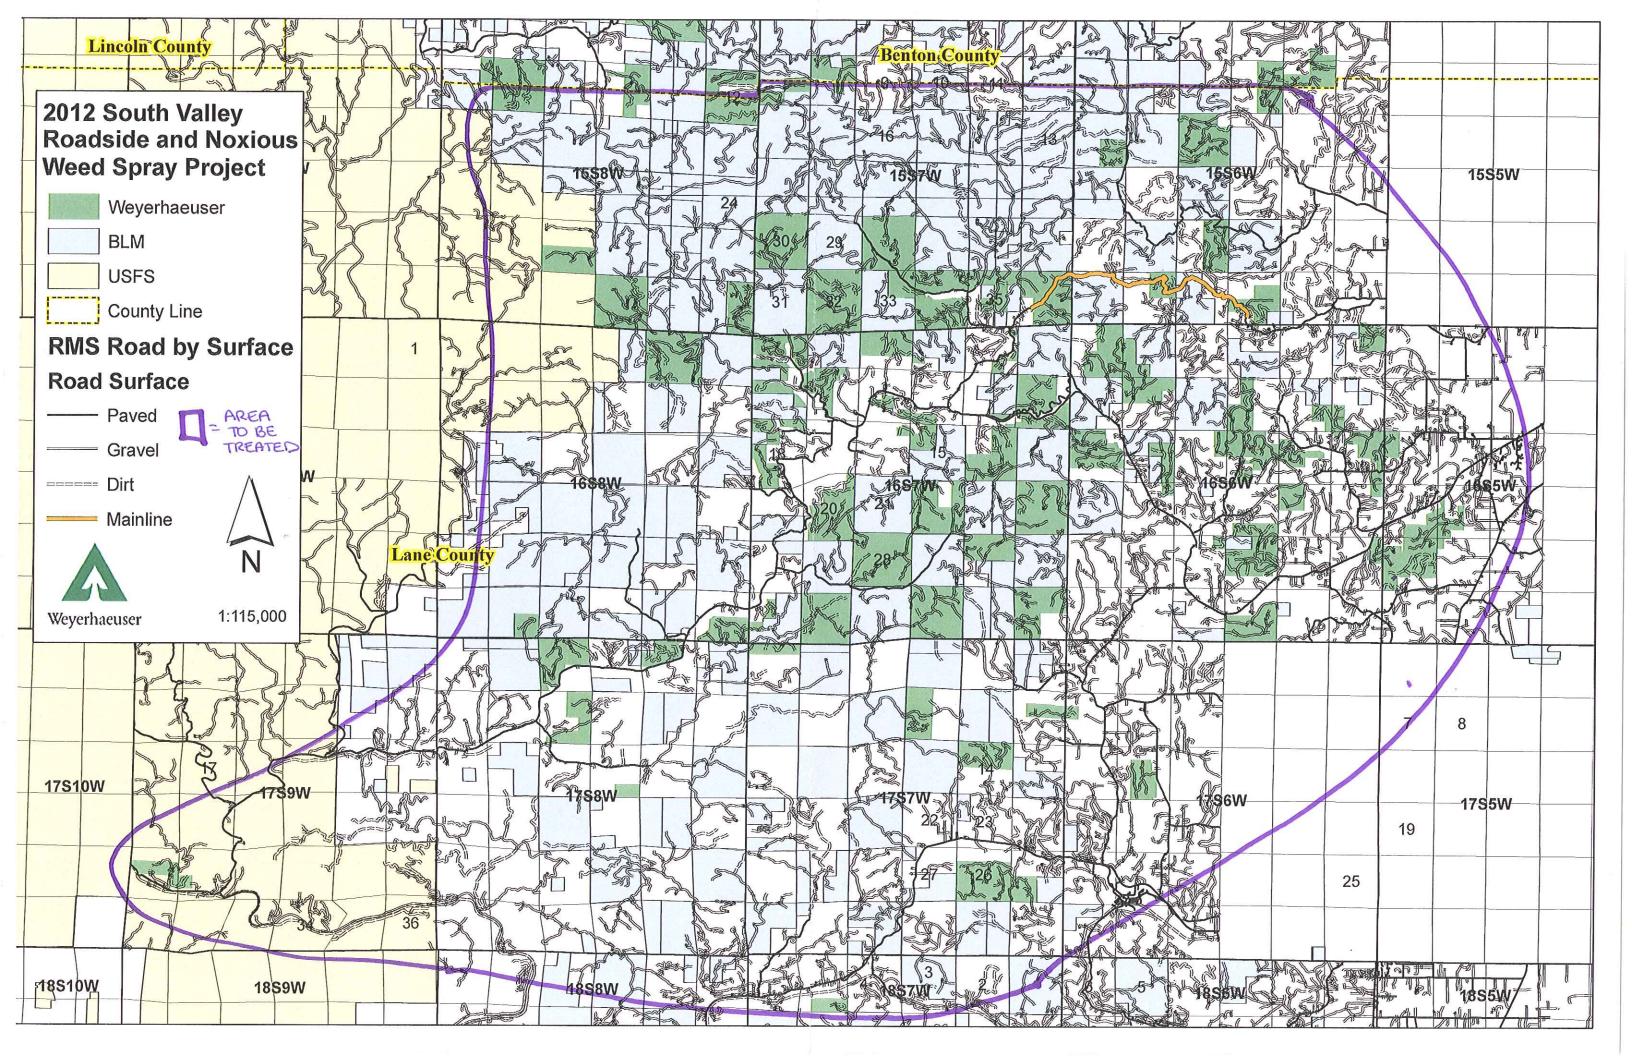

No herbicide will be directly applied within 10 feet of the high water mark of any protected resource defined as F or D streams, lakes, significant wetlands, and other areas of standing open water greater than one-quarter acre at the time of application. Other streams classified as "Unknown" will also receive this same protection. All application will be done in compliance with the Oregon Forest Practices Rules and label instructions.

Landowner will identify the above-protected resources with crew foreman prior to application by means of aerial photos, maps, and/or ground visits to provide operator with adequate information to properly treat the area.

Sincerely, Fiffany Yeckley, Forester South Valley Area
